EDUCATION

Ramapo College of New Jersey

Mahwah, NJ

Bachelor of Science in Computer Science

June 2027

Awards: Global Scholarship Recipient, College Honors Program, HackRamapo 2026 Winner

Relevant Coursework: Machine Learning, Computer Vision, Data Analytics with Python, Data Visualization, Software Design, Data Structures and Algorithms, Operating Systems, Unix Environment, Discrete Structures, Assembly Language

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, C++, SQL
- **ML / AI:** Scikit-learn, Neural Networks (CNNs, RNNs, LSTMs), Embeddings, RAG, Transformers
- **Data & Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Plotly, Excel
- **Web, Infra & Tools:** Next.js, React, PostgreSQL, pgvector, Docker, Git, Linux, Jupyter

WORK EXPERIENCE

Office of Institutional Research

Data Analyst Intern, Mahwah, NJ

Feb 2024 – Present

- Supported institutional budgeting and performance reporting by evaluating datasets spanning 1,000+ records.
- Increased reporting accuracy by 15% through systematic data validation, cleaning, and reconciliation.
- Developed Excel-based financial models and statistical summaries used in budget planning for 5+ departments.

Ramapo Information Technology Services

Student IT Consultant, Mahwah, NJ

Sept 2024 – Present

- Resolved 20–30 technical support tickets per week involving network connectivity, hardware, and user access for 5,000+ students and staff.
- Monitored campus-wide network infrastructure using Cisco Prime, enabling faster identification of performance issues.
- Maintained a high-volume ticketing workflow with an average 1-day resolution time and 95% customer satisfaction.

PROJECTS

- **Personal Canvas – AI-Powered Academic Dashboard (Next.js, TypeScript, PostgreSQL, pgvector, OpenRouter)**
 - Built a full-stack academic assistant that syncs Canvas LMS data (courses, assignments, grades, announcements) into a local PostgreSQL database via a custom Node.js parser.
 - Implemented a Retrieval-Augmented Generation (RAG) pipeline using pgvector for vector storage and NVIDIA's LLaMA-Nemotron embedding model to enable semantic search over personal academic data.
 - Developed an AI chat interface with persistent memory, multi-step tool calling, and automatic conversation compaction to maintain context across sessions.
 - Delivered streaming AI-generated course insights including assignment prioritization, effort estimation, and grade trend analysis via a Next.js API powered by the Vercel AI SDK.
- **AskMyDocs – RAG Document Q&A (Python, FAISS, SentenceTransformers, pdfplumber)**
 - Designed and implemented a Retrieval-Augmented Generation pipeline to answer questions across 50+ PDF and TXT documents.
 - Built document ingestion, normalization, and overlapping chunking workflows to index thousands of text segments.
 - Generated semantic embeddings using SentenceTransformers and executed top-k similarity search with FAISS.
 - Delivered source-grounded responses with similarity scores, improving answer reliability and reducing hallucinations.

CERTIFICATIONS

Machine Learning (Coursera), Deep Learning (Coursera), CNN (Coursera), Modern React with Redux (Udemy)
